

CRANE RETROFITS

S-series hoist retrofit

Radically redesigned with never-before-seen features – both inside and out – the S-series will set the standard in lifting for years to come. The newly designed structure includes next-generation features such as off-set reeving, stepless hoisting movement and synthetic rope to make lifting more precise and powerful.

Replace your existing hoist with the revolutionary new S-series

NEXT GENERATION REEVING
 The tilted rope drum enables more direct rope angles to decrease the wear and tear of reeving components. Offset reeving means more balanced wheel loads for less stress on the crane structure.

NEW, SYNTHETIC ROPE
 The evolutionary synthetic rope is durable but light and doesn't require lubrication. The rope features a strong, symmetric structure for less rope defects and safer handling.

TOTAL CONTROL
 Stepless hoisting allows for smooth and accurate material handling. Inverter controlled hoists means more accurate load positioning, safer load handling and less structural demands.

INDEPENDENT BRAKE
 The re-designed independent brake is safer, quick and easy to maintain, and enables higher hoisting speeds.

SMART FEATURES FOR SAFETY AND ADVANCED CRANE CONTROL
 Rope angle measurement allows for the use of Smart Features including Hook Centering, Snag Prevention and Follow Me.

Tap into the digital ecosystem

The S-series hoist comes equipped with TRUCONNECT® Remote Monitoring. TRUCONNECT Remote Monitoring collects condition, usage and operating data and provides alerts of certain anomalies. The data can be used in maintenance planning and in predicting possible component or equipment failure and is an integral part of predictive maintenance.

When you have TRUCONNECT - you have access to the yourKONECRANES customer portal. Your TRUCONNECT stats and alerts can be viewed at any time and insights can be gained by looking at anomalies, patterns and trends in the data.

HOOK CENTERING
 Hook Centering greatly reduces side pull during lifting by positioning the bridge and trolley directly over the load.
 Watch a video of Hook Centering in action.

SNAG PREVENTION
 Snag Prevention is designed to stop all crane movement if the hook, sling or load is detected to be caught on an object.
 Watch a video of Snag Prevention in action.

FOLLOW ME
 Follow Me allows the crane to be moved above the load by simply guiding the hook by hand.

Konecranes is a world-leading group of Lifting Businesses™, serving a broad range of customers, including manufacturing and process industries, shipyards, ports and terminals. Konecranes provides productivity enhancing lifting solutions as well as services for lifting equipment of all makes. In 2017, Group sales totaled EUR 3,136 million. The Group has over 16,000 employees at 600 locations in 50 countries. Konecranes shares are listed on the Nasdaq Helsinki (symbol: KCR).
